Jeremy Shih

661-625-8403 | jeremy.shih063@gmail.com | linkedin.com/in/jeremy-shih-ucsd | github.com/Macu239

Education

University of California, San Diego — La Jolla, San Diego
Bachelor of Science in Computer Science, GPA: 3.7 — *June 2027*

Technical Skills

Languages: JavaScript, TypeScript, HTML/CSS, Python, C/C++, SQL (Postgres), Java
Frameworks: React, Node.js, Express.js
Developer Tools: Git, Docker, AWS (EC2), GitHub Actions, VS Code, Vim
Other: Figma, Excel, PowerPoint, Bilingual (Mandarin)

Projects

Travel Splitter | *Next.js, React, Node.js, Express, MongoDB* — Mar 2026 - Present

- Built a full-stack expense-splitting app for group trips with real-time cost tracking and settlement calculation.
- Designed backend data models for users, trips, and expenses to support multi-user shared financial records.
- Implemented debt optimization logic to minimize who-owes-whom transactions.
- Developed a responsive React/Next.js UI with REST APIs and persistent storage, deployed via GitHub and Render/Vercel.

AI Resume Tailor | *TypeScript, Next.js, React, Groq (LLM), Upstash Redis* — Jun 2026 - Present

- Built a full-stack Next.js application that tailors resumes and cover letters using the Groq LLM API.
- Designed a modular AI service layer, enabling LLM providers to be swapped with minimal code changes.
- Implemented Upstash Redis rate limiting to protect API endpoints from abuse.
- Built an iterative refinement workflow using follow-up natural language instructions.
- Writing Vitest and Testing Library tests and deploying the application on Vercel.

Codekata — Code Typing Game | *JavaScript, HTML/CSS, Jasmine, Playwright* — Mar 2026 - Jun 2026

- Built a configurable countdown-timer feature end-to-end — game-engine logic, difficulty-based time limits, a settings toggle, and win/lose end-screen detection.
- Implemented the input-pane view-mode toggle, disabling it during active gameplay to prevent invalid state transitions.
- Fixed UI timing bugs and cross-branch merge conflicts in a collaborative 8+ person team following Conventional Commits and PR review.
- Wrote Playwright e2e tests for the settings panel and countdown controls, keeping locators resilient to markup changes.

2048 Game | *C++* — Jun 2024 - Dec 2024

- Implemented a fully functional terminal version of the 2048 puzzle game in C++ using an encapsulated class to manage board state, scoring, and move logic.
- Designed board logic using a 2D array and a single-pass, two-pointer compaction algorithm to handle tile merging and movement, correctly preventing double-merges within a single move.
- Implemented WASD keyboard input controls and loss-detection logic that scans for open cells and adjacent equal tiles to determine when no valid moves remain.

Experience

College Assistant - International Services and Programs (ISP) — Nov 2023 - Jun 2025
College of the Canyons — *Santa Clarita, CA*

- Developed bilingual marketing materials and digital outreach campaigns that increased program inquiries by 20%
- Presented "Life in the USA" orientation seminars to 40+ international students
- Mentored 10+ Taiwanese students on U.S. college systems, academic planning, and cultural adaptation
- Maintained and updated the ISP website to improve clarity and accessibility for international applicants
